

CHEATSHEET

How to Prompt Like a Pro

Write Better Software Test Cases with AI

Learn how to write high-quality prompts to generate a series of structured, contextual test cases in seconds.

Why Prompts matter (and how they save you hours)

You're not just "using Atto," you're working with Atto, your AI coworker who's fast, precise, and doesn't guess.

When it comes to AI-augmented testing, prompts alone aren't enough. If AI is the engine, context is the fuel and without the right inputs, it's just guesswork. That's why "Garbage In, Garbage Out" (GIGO) is one of the reasons AI testing fails.

With Atto, it's not about typing a clever prompt. It's about giving your AI coworker the complete picture: PRDs, user stories, Figma designs, past test results, even videos of real user journeys. The more real-world context you feed it, the less it has to guess and the more predictable, production-ready your test cases become.

Well-structured prompts lead to:

-  Maximum test coverage with minimal missed paths
-  Better edge-case handling
-  Less back-and-forth and rework
-  Test cases that align directly with your stories, flows, and features

The Prompt Power Formula

Use this framework for every test case prompt:

WHO + WHAT + WHY + HOW + EXAMPLES

Element	Description	Example
WHO	User role or system under test	"As a registered user..."
WHAT	Feature or action being tested	"...resetting a password..."
WHY	Purpose or expected behavior	"...to ensure expired tokens are handled."
HOW	Constraints, variations, platforms	"Include 2FA and expired token scenarios."
EXAMPLES	Seed inputs or expected output	"E.g., token expires after 10 minutes."

Build smarter prompts: Checklist

- ✔ What do you want AI to generate?
- ✔ What story/feature/flow are you testing?
- ✔ Are edge cases and risk conditions included?
- ✔ Did you attach user stories, designs, artifacts?

Pro Tips:

- Use personas: "As a mobile user..." or "As a QA engineer..."
- Loop in old stories or test cases for context
- Refine your prompt iteratively until test-ready

Ready-to-Use Prompt Template:

Goal: Generate test cases for [feature or process].

What I Have:

[User roles or types]

[Payment or interaction methods]

[Supporting features or integrations]

What I Want:

Cover [all combinations / edge cases / failures / retries]

Include [validation / exception / third-party behavior]

Expected Outcomes:

[Comprehensive coverage / error handling / reliability / messaging]

Based on this template, the following are example prompts for specific domains.

Example Prompts by Domain

Banking & FinTech

Goal: Generate test cases for the funds transfer feature in a banking app.

What I Have:

- Transfer modes: ACH, Wire Transfer, Zelle
- Users: Personal and Business accounts
- Daily and per-transaction transfer limits
- Multi-factor authentication (verification code, biometric)

What I Want:

- Cover all transfer modes with different limits
- Include failure scenarios (invalid account, exceeded limits)
- Validate security checks and confirmation flows

E-commerce

Goal: Generate test cases for shopping cart and checkout flow.

What I Have:

- Guest and logged-in checkout
- Payment methods: Credit Card, PayPal, Apple Pay
- Discount codes and gift cards

What I Want:

- Test all payment and discount combinations
- Include failed payment and stock-out scenarios
- Validate tax/shipping calculations

Healthcare

Goal: Generate test cases for patient appointment scheduling.

What I Have:

- User roles: Patient, Doctor, Admin
- Appointment types: In-person, Telehealth
- Time zone and availability rules

What I Want:

- Validate booking with overlapping appointments
- Include cancellations, reschedules, and no-shows
- Test HIPAA-compliance checks

Travel

Goal: Generate test cases for airline ticket booking.

What I Have:

- One-way, round-trip, multi-city booking
- Fare classes: Economy, Premium, Business
- Loyalty program integration

What I Want:

- Validate seat selection and baggage options
- Include booking failures (invalid card, seat unavailable)
- Test loyalty point redemption and accrual

SaaS

Goal: Generate test cases for user role management in a SaaS dashboard.

What I Have:

- Roles: Admin, Editor, Viewer
- Permissions matrix per role
- Multi-tenant setup

What I Want:

- Verify correct permissions for each role
- Include role upgrade/downgrade flows
- Test unauthorized access attempts

Retail POS

Goal: Generate test cases for point-of-sale checkout.

What I Have:

- Payment: Cash, Credit/Debit, Gift Card, Mobile Pay
- Discounts: Loyalty, Employee, Promo
- Tax variations by state

What I Want:

- Cover payment-discount combinations
- Include voided sales and returns
- Verify accurate tax application

Try the examples (No strings attached)

Step 1: Create your 7-day free trial of Test Management by Testsigma.

Step 2: Once you are in, choose Sample Demo Project (as shown below) and the same would be created for you.

Step 3: The AI test case generation screen loads (as shown below), and you will see an option to attach a Jira story, Figma design, images, or a walkthrough video. Attach the file(s).

Step 4: The prompt text box on the bottom left will have a sample prompt for you (as shown below). You can also replace it with any of the templates above and make contextual edits as required. Click on “Generate” and in seconds, you’ll see a list of test cases generated that align with your features, flows, and risk coverage.

No setups. No limits. Just results.

"But I can just use ChatGPT..."

Sure, but here's the deal:

- With Test Management by Testsigma, you can create, store and run your test cases - all in one place. You can also generate bug reports and report them into your project management tool.
- Prompt outputs stay linked to your user stories, test runs, and bug reports
- No copy-pasting into spreadsheets or switching tools - it's all traceable, reusable, and action-ready.

Prompt Do's & Don'ts

✔ Do:	✗ Don't:
Be clear on your goal and scope	Use one-liners without context
Provide all relevant inputs and constraints	Omit data types, limits, or variations
Ask explicitly for edge cases	Forget security or compliance checks

Pro Tip:

The more specific your prompt, the more complete your test coverage. A 20-second investment in your prompt can save hours of rework.

Write high-quality prompts and generate tests with AI.

About Testsigma

Testsigma is an agentic test automation platform powered by AI-coworkers that work alongside QA teams to simplify testing, accelerate releases and improve quality across web, mobile, API, and applications like Salesforce and SAP.

At the core of Testsigma are Testsigma Copilot and Atto, an AI coworker for QA teams that mobilizes a team of AI agents to autonomously plan, design, develop, execute, maintain, and optimize tests. The platform also provides end-to-end test management, powerful built-in features like visual testing, accessibility testing, cross-browser & cross-device testing, and seamless extensibility through 30+ native integrations and custom apps.

Used by KFC, DHL, Samsung, Cisco, and more, Testsigma empowers quality engineering teams to speed up their testing effortlessly, thus ensuring high-quality software delivery with confidence.
